SUBJECT: Forecast for Release from Platform A -- Santa Barbara Channel

For additional information, please contact Chris Barker,
NOAA Emergency Response Division, Seattle, WA.
Phone: (206) 526-4911.

This map is a revised version of the trajectory forecast prepared yesterday, Dec 9th. It is exactly the same forecast, except that the results from OSPR's remote sensing overflight are added to the map. Note that that this was a forecast for this morning, December 10th, and the OSPR overflight data was collected on the afternoon of Dec 8th. On the morning of Dec 9th there were winds from the southeast, and during most of Dec 9th, the HF radar showed currents in that region moving to the northwest, so we expect that any oil remaining from that observed by the OSPR platform to still be near the forecast region.

We understand that no significant oil was observed on this morning's overflights, so we are not producing an updated trajectory.
